AI- Powered Decision Intelligence for F&B

Presented by

1. Celine Kuan Xin Yi
2. Law Zhi Xuan
3. Loke Xiu Xiang
4. Tevy Chong Tein Vey
5. Tehvashree A/P Prabakara Rao

Problem STATEMENT

- ❌ Decisions based on intuition, not data
- ❌ Fragmented data across multiple systems
- ❌ No simple analytics tools for non-technical users
- ❌ SMEs lack expertise

Goal of The System

- **Provide an AI-powered decision intelligence platform for F&B businesses**
- **Transform raw, fragmented data into clear insights and recommendations**
- **Enable users to understand:**
  - What is happening?
  - Why it is happening?
  - What actions to take?
- **Reduce reliance on intuition and support data-driven decision-making**

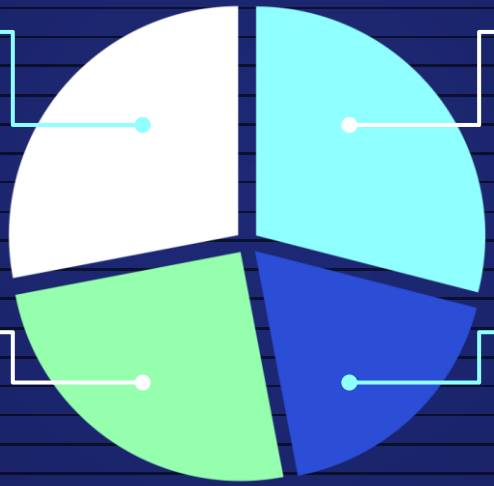
TARGET AUDIENCE

Restaurant Owners

Monitor performance and improve profitability

F&B Entrepreneours

Understand market dynamics and optimize strategies



Operations Managers

Identify inefficiencies and improve operations

Entry-level Business Analysts

Gain insights without complex tools

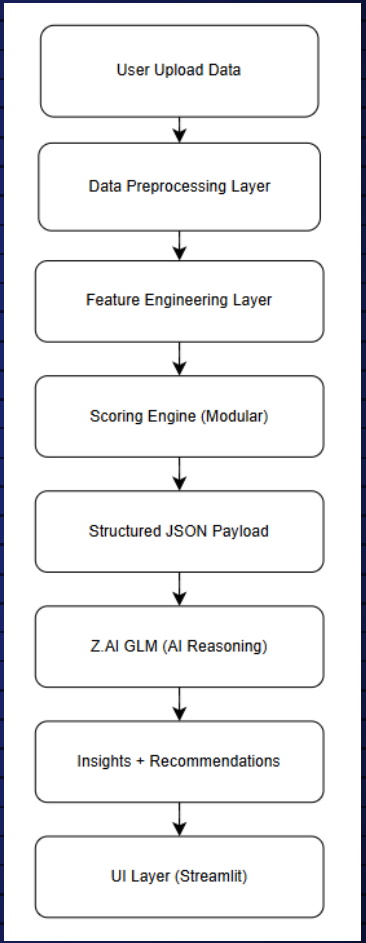
Solution

Upload Data → AI Analysis → Get Insights

- ✓ Turn raw data into clear business insights instantly
- ✓ Understand WHY performance is good or bad
- ✓ Identify hidden problems
- ✓ Make faster, data-driven decisions without expertise
- ✓ Reduce revenue loss from poor strategy

How it works?

1. Data Preprocessing Layer – Cleans and standardizes input data
2. Feature Engineering Layer – Converts raw data into meaningful signals
3. Modular Scoring Engine: Generate performance scores such as customer scores, pricing score, supply score and business score
4. Standardization: Ensure all scores are consistent and comparable across different datasets
5. Structured JSON Payload: Packages scores, metrics and derived insights into a clean format for AI processing
6. Z.AI GLM Integration: Interpret structured inputs to explain performance, identify root causes, generate recommendations
7. UI Layer: Displays results



THANK YOU
